

Bart De Win?

- •18+ years of Information Security Experience
 - •Ph.D. in Computer Science Application Security
- •Author of >60 scientific publications
- •ISC2 CSSLP certified
- •Senior Manager @ PwC Belgium:
 - •Expertise Center Leader Trusted Software
 - •(Web) Application tester (pentesting, arch. review, code review, ...)
 - •Trainer for several courses related to secure software
 - •Specialized in Secure Software Development Lifecycle (SDLC)
- OWASP OpenSAMM co-leader
- · Contact me at bart.de.win@be.pwc.com

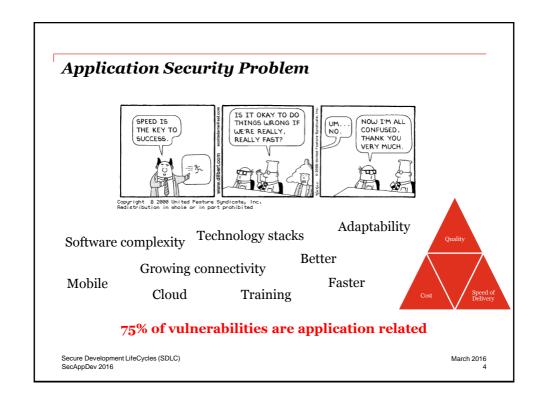

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

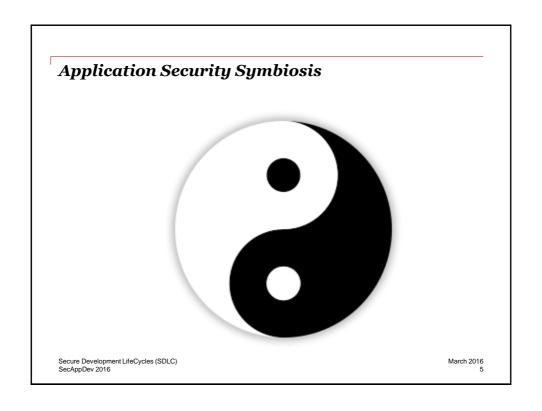

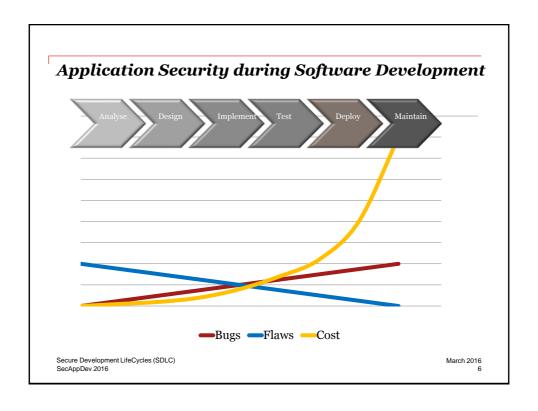

Agenda

- 1. Motivation
- 2. Process Models
- 3. Agile Development
- 4. Maturity Models
- 5. Conclusion

March 2016

The State-of-Practice in Secure Software Development

Problematic, since:

- · Focus on bugs, not flaws
- · Penetration can cause major harm
- · Not cost efficient
- · No security assurance
 - All bugs found?
 - Bug fix fixes all occurences ? (also future ?)
 - Bug fix might introduce new security vulnerabilities

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

SDLC?

Enterprise-wide software security improvement program

- · Strategic approach to assure software quality
- · Goal is to increase systematicity
- · Focus on security functionality and security hygiene

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

SDLC Objectives & Principles

To develop (and maintain) software in a consistent and efficient way with a demonstrable & standards-compliant security quality, inline with the organizational risks.

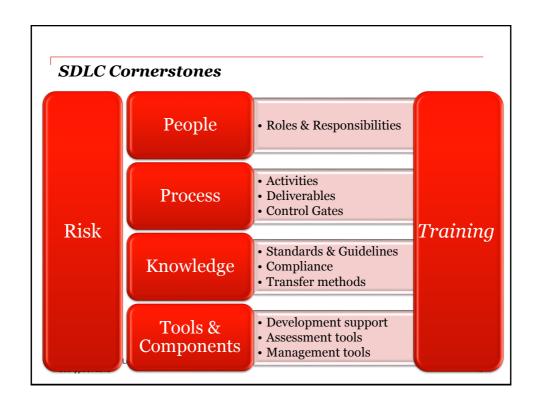

Secure Development LifeCycles (SDLC) SecAppDev 2016

March 2016

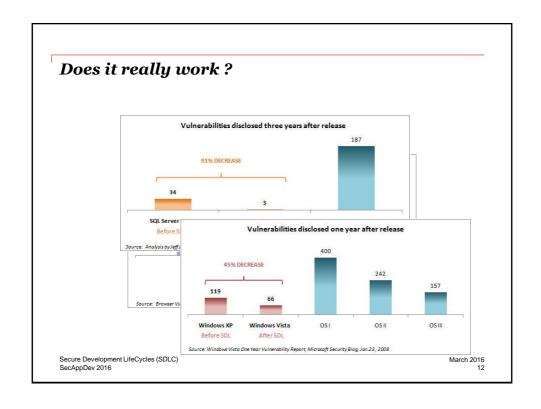

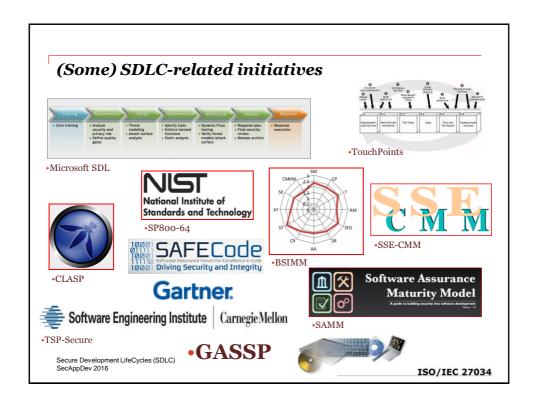

Strategic?

Organizations with a proper SDLC will experience an 80 percent decrease in critical vulnerabilities

Organizations that acquire products and services with just a 50 percent reduction in vulnerabilities will reduce configuration management and incident response costs by 75 percent each.

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

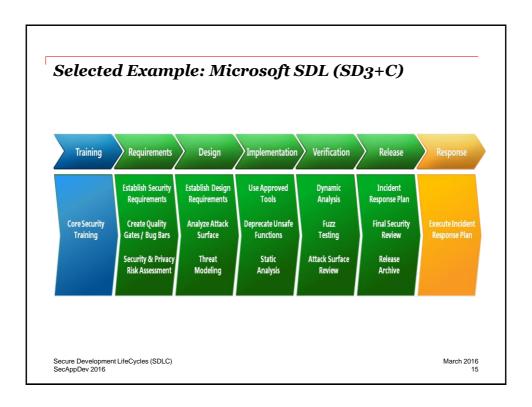

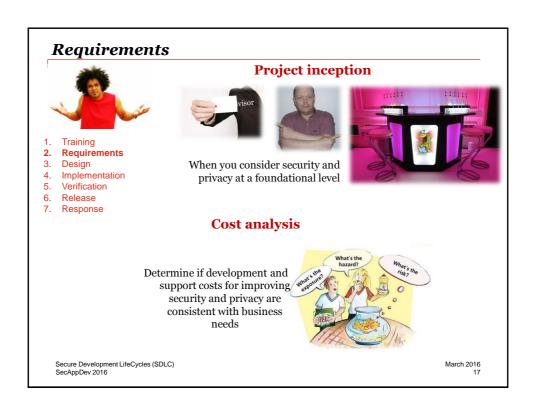

Agenda

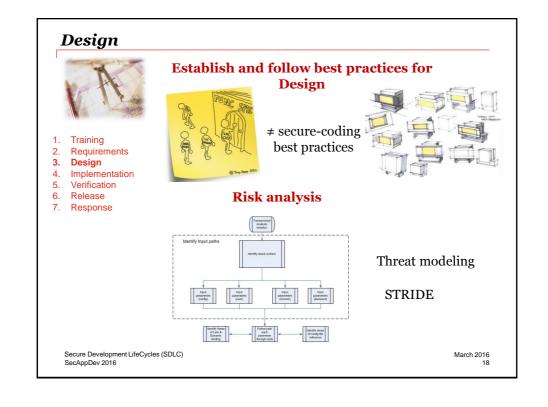

- 1. Motivation
- 2. Process Models
- 3. Agile Development
- 4. Maturity Models
- 5. Conclusion

March 2016

Implementation

Creating documentation and tools for users that address security and privacy

- Design Implementation
- 4. Verification

Training

Requirements

2.

3.

- 6. Release
- 7. Response

Establish and follow best practices for development

- Review available information resources
- Review recommended development tools
- Define, communicate and document all best practices and policies

Secure Development LifeCycles (SDLC) SecAppDev 2016

March 2016

Verification

- **Training**
- Requirements
- Design
- Implementation
- 5. Verification
- Release
- Response

Security and privacy testing

Security push

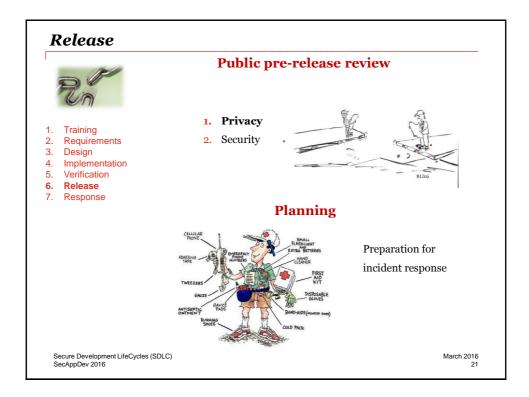

March 2016

PRIVACY

Secure Development LifeCycles (SDLC) SecAppDev 2016

Response

- Training
- 2. Requirements
- 3. Design
- Implementation
- Verification
- 6. Release
- 7. Response

Execute Incident Response Plan

=> able to respond appropriately to reports of vulnerabilities in their software products, and to attempted exploitation of those vulnerabilities.

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Process Models: wrapup

Microsoft SDL:

Mature, long-term practical experience

Heavyweight, ISV flavour

Several supporting tools and methods

Other process models exist, with their pro's and con's

In general, no process will fit your organization perfectly Mix-and-Match + adaptation are necessary

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Agenda

- 1. Motivation
- 2. Process Models
- 3. Agile Development
- 4. Maturity Models
- 5. Conclusion

Agile Models: Rationale and Fundamentals

- Many traditional, large-scale software development projects are going wrong
 - · Combination of business and technical causes
- Software is delivered late in the lifecycle
- Little flexibility during the process

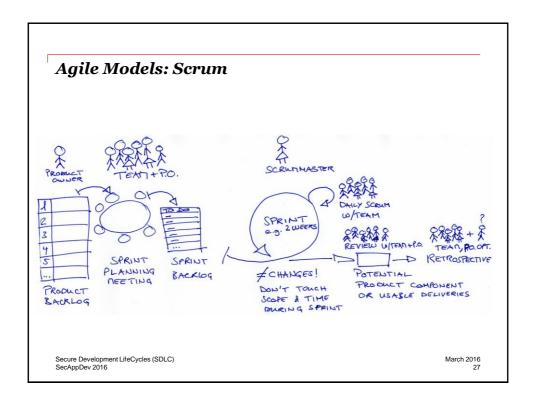

Agile models focus on:

- Frequent interaction with stakeholders
- · Short cycles
- => to increase flexibility and reduce risk

Secure Development LifeCycles (SDLC) SecAppDev 2016

March 2016

13

Agile & Secure development: a mismatch?

Agile Dev. Security

Speed & Flexibility Stable & Rigorous

Short cycles Extra activities

Limited documentation Extensive analysis

Functionality-driven Non-functional

Secure Development LifeCycles (SDLC) SecAppDev 2016

March 2016 28

MS SDL-Agile

Basic approach: Fit SDL tasks to the backlog as non-functional stories

Non-Technical vs. Technical

Requirement vs. Recommendation

Each SDL task goes in one of three types of requirements:

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Every-Sprint Requirements (excerpt)

- · All team members must have had security training in the past year
- · All database access via parameterized queries
- · Fix security issues identified by static analysis
- Mitigate against Cross-Site Request Forgery
- Update Threat models for new features
- · Use Secure cookies over HTTPS
- · Link all code with the /nxcompat linker option
- Encrypt all secrets such as credentials, keys and passwords
- · Conduct internal security design review

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Bucket Requirements (excerpt)

Bucket A: Security Verification

- Perform fuzzing (network/ActiveX/File/RPC/...)
- · Manual and automated code review for high-risk code
- · Penetration testing

Bucket B: Design Review

- Conduct a privacy review
- Complete threat model training

Bucket C: Planning

- Define or update the security/privacy bug bar
- Define a BC/DR plan

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

One-Time Requirements (excerpt)

- · Create a baseline threat model
- Establish a security response plan
- · Identify your team's security expert
- · Use latest compiler versions

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Abuser Stories

Treat application security into software development by writing up application security risks as stories

- Security stories: "As a developer, I want to prevent SQLi into my application"
 - Not a real user story (not relevant for product owner, but to help the development team)
 - · Never really finished
 - · Cfr MS examples
- Thinking like the bad guy: "User X should not have access to this type of data"
 - Think about what users don't want to and can't do, how to trust users, what data is involved, ...

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Thou shall use Iteration Zero

Many agile projects start with an "Iteration Zero" to

- · Get the team together
- Choose tools and frameworks
- · Get to know the domain

This is an opportunity for security too, to

- Assign security responsibles
- · Select security tools
- Determine risk levels

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

Security Involvement in the Process

Ensure that security-savvy people are involved at important phases:

- Planning game (to enhance/verify requirements)
- · Development (daily follow-up)
- Review (to support acceptance)
- Retrospective (to improve dev. Practices for security)

Different profiles can be distinguished:

- · Security architect
- · Security engineer
- · Risk Manager/Governance

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016 35

Agenda

- 1. Motivation
- 2. Process Models
- 3. Agile Development
- 4. Maturity Models
- 5. Conclusion

March 2016

Why Maturity Models?

An organization's behavior changes slowly over time.

· Changes must be iterative while working toward long-term goals

There is no single recipe that works for all organizations

· A solution must enable risk-based choices tailored to the organization

Guidance related to security activities must be prescriptive

· A solution must provide enough details for non-security-people

Overall, must be simple, well-defined, and measurable

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016

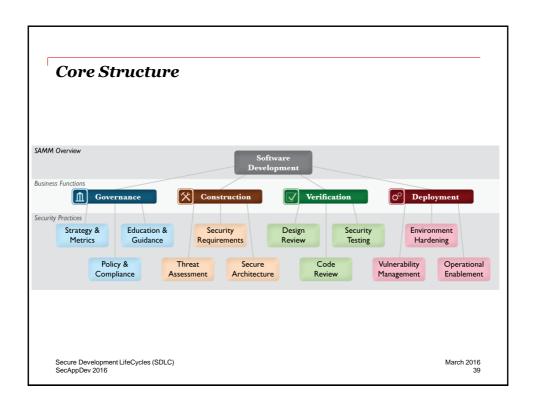

Selected example: OpenSAMM

Maturity Models wrapup

OpenSAMM

Comprehensive and rich model, more than just activities Supporting tools are available

Real-world case studies, but few are openly shared

Other models exist with their pro's and con's

Maturity models provide an excellent framework for reasoning on software assurance, on a *strategic* level.

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016 47

Agenda

- 1. Motivation
- 2. Process Models
- 3. Agile Development
- 4. Maturity Models
- 5. Conclusion

March 2016

Conclusions

SDLC is the framework for most of this week's sessions

No model is perfect, but they provide good guidance

Take into account all cornerstones

Risk Management is key for rationalizing effort

Secure Development LifeCycles (SDLC) SecAppDev 2016 March 2016
